

# DENBOW

innovating naturally

Denbow designs and installs complete Erosion & Sediment Control, Slope Stabilization, Land Reclamation and Stormwater Management packages. Superior design using compost-based products means erosion is virtually eliminated and sediment remains onsite where it belongs while minimizing maintenance and removal costs. Our advanced installation technology ensures the project is completed with minimal impact to the worksite and surrounding areas. Our products meet or exceed municipal ESC bylaw requirements. Specifying? - contact us for assistance.

## EROSION & SEDIMENT CONTROL

Denbow is the Filtrex® certified installer for British Columbia. The Filtrex toolbox contains compost-based erosion and sediment control solutions. Filtrex® FilterSox™ are three-dimensional tubular geofiltration socks used in a variety of sediment control applications:

- ✓ silt fence alternatives
- ✓ straw bale replacements
- ✓ substitute for common construction site BMP's
- ✓ living retaining walls
- ✓ living dyke systems
- ✓ streambank restoration
- ✓ slope stabilization & revegetation
- ✓ attractive landscape features

Filtrex FilterSox technologies utilize nature's own systems in order to control erosion and improve stormwater quality.

We are also an approved Rexus installer. Rexus utilizes compost as the building blocks for erosion and sediment control BMP's for long-term sustainable products. Diverting these organic materials out of the landfills and using them in place of synthetic BMP's there is a significant "net" win for our environment.

Our many successful applications of Rexus EcoBlanket for slope stabilization and revegetation have proven to be the perfect solution for controlling erosion naturally.

From the ski jump at the Whistler Olympic park to backyard slopes, EcoBlanket is a proven choice.
